

YOU HAVE TOLD US HOW YOU WORK AND WHAT YOU NEED

Version 9.0.0 of the OSS ASN.1 Tools for C is now available for the following 32 and 64 bit platforms: Windows, Solaris, Linux, and HP-UX.

What is all the excitement about?

- [ASN.1 Studio](#) - a powerful new IDE packed with functionality that allows you to compile ASN.1 specs, display, create, modify or encode a message with just a few mouse clicks, and so much more!
- User-friendly C code generated for ASN.1 open types
- Generated code demonstrating how to perform encoding/decoding operation for any type in your ASN.1 specification.
- TOED (Time Optimized Encoder/Decoder) is now the default runtime library providing you with speed optimized code "right out of the box". We haven't retired the SOED (Space Optimized Encoder/Decoder), we've just put our faster foot forward in response to a growing focus on speed.

Sounds like a lot of changes? Don't worry. From easy to follow instruction manuals, to 24x7 technical support, and instructional videos, we'll guide you every step of the way. You can even schedule a private session to walk your team through any upgrade concerns they may have.
