

OSS Nokalva Announces New Technology Partnership with Kabira™ Technologies

Somerset, N.J., November 27, 2007 – OSS Nokalva, Inc., announced today that Kabira Technologies, Inc., a leading provider of high-performance transaction processing software, has integrated the OSS ASN.1 Tools into their Kabira Convergent Charging™ (KCC) mediation solution. KCC, an open, standards-based, carrier-class platform, gives communications service providers the ability to charge for new, revenue enhancing services across all types of networks. KCC is optimized for extreme transaction processing performance for high volume, real-time applications.

“Kabira is committed to offering standards-based high-performance solutions and we are delighted to become their preferred supplier of ASN.1 technology. Kabira, together with their partners, provide an excellent channel for the OSS ASN.1 product line,” explained Grace Sigona, OSS Director of Sales.

“We selected Nokalva’s OSS ASN.1 Tools because they offer a high degree of flexibility without sacrificing performance. In KCC, we have integrated the OSS ASN.1 Tools to deliver what we believe are the leading high performance, flexible ASN.1 encoding and decoding capabilities with minimal development required from the service providers themselves,” commented Jay Krackeler, product manager for Kabira Technologies’ platform and vendor products.
